

CAPABILITY STATEMENT

Steel Frames, Engineered Properly.

Design, manufacture and installation of light gauge and structural steel framing in Brisbane, Queensland.

ABOUT CADROLL

One team from first drawing to final fixing.

CADROLL is a steel framing company run by engineers. We take your plans, model them in 3D, roll-form every wall frame, truss and floor cassette in our own Brisbane facility, and install them on site. Light gauge and structural steel, handled by one team that answers for the result: one quote, one program and one point of contact.

WHAT WE DO

Light Gauge Steel

Wall frames, roof trusses and floor cassettes roll-formed from high-tensile G550 steel to your approved drawings.

Structural Steel

Columns, beams, portal frames and connections for long spans, heavy loads and commercial work.

Engineering & Drafting

3D models, shop drawings and engineering documentation for your certifier, coordinated before production.

Installation

Our crews stand, brace and fix the frames we made, working to your site program.

OUR FRAMING SYSTEMS

Five systems, one engineering check.

01	**Steel Wall Frames**	Braced, punched for services and ready to lift into place.
02	**Steel Roof Trusses**	Any roof shape, pitch or cladding; straight lines that stay straight.
03	**Floor Cassettes & Joists**	Pre-assembled panels for flat, level floors.
04	**Structural Steel**	Heavy members where spans and loads call for them.
05	**Connections & Fixings**	Engineer-matched hardware, packed and labelled by panel or zone.

HOW WE WORK

1

Review & Quote

Free drawing review, then an itemised proposal.

2

Engineering

Modelled in 3D, checked by an engineer.

3

Manufacturing

Roll-formed, assembled and checked before dispatch.

4

Delivery

Labelled and in installation order, booked to your program.

WHY BUILDERS CHOOSE CADROLL

- One contract and one phone number for the whole structural frame.
- Every frame checked by an engineer before it leaves the factory.
- Over-specified steel trimmed before it is made: less material, fewer site days.
- Clashes, openings and connections resolved in the model, not on site.
